

FACE AUTHENTICATION & TEMPERATURE RECORDING

AWASIN

BOOSTING YOUR ATTENDANCE & ACCESS SYSTEM WITH ZERO CONTACT

Contactless authentication of attendance with temperature recording in safest & effective way.

The system is embedded with temperature recording and face authentication to enable organisations move towards a 'touch-less' attendance and workplace access.

With the thermal imaging device in the system, organisations can track staff or visitors with high temperatures that may indicate infection, and build in operating procedures to avoid further contaminations caused by finger/thumb-based biometric scanners. Face Authentication and Temperature Recording with Temperature Capturing can detect and match the faces of staff members and mark their attendance along with temperature.
